Illumigen (2001)

VisionGate (2001)

Gregor Mendel, the father of modern genetics, presents his laws of heredity. (1865)

Transistor invented. (1947)

Double helix structure of DNA revealed. (1953)

Integrated circuit invented. (1958)

Astronaut Neil Armstrong steps onto the moon. (1969)

Recombinant DNA perfected. (1973)

Monoclonal antibodies produced. (1975)

First human gene cloned. (1977)

US Supreme Court rules man-made organism patentable. (1980)

Bayh-Dole Act provides for university technology transfer. (1980)

Washington Biotechnology and Biomedical Association established. (1989)

Washington Association for Biomedical Research established. (1989)

Human Genome project established. (1990)

Washington Biotechnology Foundation established. (1993)

Human chromosome 22 sequenced, a milestone in the human genome project. (1999)

Human Genome Project working draft sequence published. (2001)
